

Natural changes of population 2015 – 2020

Profile
July 2021

Sevojno¹

	2015	2020
Population size	6840	6551
Livebirths, Number	63	58
Deaths, Number	71	87
Natural increase, Number	-8	-29
Infants deaths, Number	1	0
Livebirths, per 1,000 population	9	9
Deaths, per 1,000 population	10	13
Natural increase, per 1,000 population	-1	-4
Infants deaths, per 1,000 livebirths	16	0

Infants deaths, 2015–2020

Infants deaths per 1,000 livebirths, 2015–2020

Table. Natural changes of population, Sevojno

Year	Number of population	Livebirths	Deaths	Natural increase	Infants deaths	per 1000 population			Infant deaths per 1000 livebirths
						Livebirths	Deaths	Natural increase	
2015	6840	63	71	-8	1	9.2	10.4	-1.2	15.9
2016	6783	51	73	-22	0	7.5	10.8	-3.2	0.0
2017	6722	39	76	-37	0	5.8	11.3	-5.5	0.0
2018	6671	59	81	-22	0	8.8	12.1	-3.3	0.0
2019	6612	60	99	-39	0	9.1	15.0	-5.9	0.0
2020	6551	58	87	-29	0	8.9	13.3	-4.4	0.0

Definitions

Population size

Number of population in the respective year. The data on the number of population in 1961, 1971, 1981 and 1991 are census data, while for the inter-census years the number of population was calculated as an average inter-census difference. From 2002 are given the population estimates that were calculated according to the census of population results and the annual statistics of natural mechanical population movements.

Livebirths

Absolute number of live births in the course of a year. Live born child means a child giving vital signs after birth (breathing, i.e. heartbeat), even for the shortest time, regardless the mother's pregnancy duration.

Deaths

Absolute number of deaths in the course of a year. Deceased is a person that whenever after having been born live, shows permanently stopped vital signs.

Natural increase

Natural population increase is the number of live births minus the number of deaths.

Infants deaths

Absolute number of infants deaths in the course of a year. Deceased infant is a child that after having been born live and before aged one year, shows permanently stopped vital signs.

Livebirths, per 1 000 population

Livebirths rate is the ratio of the number of live births and the population size in the respective year. The number of live births is divided by the population size and then multiplied by 1000.

Deaths, per 1 000 population

General mortality rate represents the ratio between the number of deaths and the population size in the respective year. The number of deaths is divided by population size and then multiplied by 1000.

Natural increase, per 1 000 population

Natural population increase rate is the difference between the number of live births and the number of deaths, in relation to the population size in the respective year.

Natural population increase rate = (number of live births - number of deaths) / population size * 1000

Infants deaths, per 1 000 livebirths

Infant mortality rate is the ratio of deceased children under 1 year of age and live births in the respective year. The mortality rate is expressed per 1000 live births.

Infant mortality rate = (number of deceased children under 1 year of age / number of live births) * 1000
