

Natural changes of population 2015 – 2022

Profile
July 2023

Užice

	2015	2022
Population size	68965	63832
Livebirths, Number	617	495
Deaths, Number	935	1018
Natural increase, Number	-318	-523
Infants deaths, Number	4	0
Livebirths, per 1,000 population	9	8
Deaths, per 1,000 population	14	16
Natural increase, per 1,000 population	-5	-8
Infants deaths, per 1,000 livebirths	7	0

Table. Natural changes of population, Užice

Year	Number of population	Livebirths	Deaths	Natural increase	Infants deaths	per 1000 population			Infant deaths per 1000 livebirths
						Livebirths	Deaths	Natural increase	
2015	68965	617	935	-318	4	8.9	13.6	-4.7	6.5
2016	68314	625	945	-320	4	9.1	13.8	-4.7	6.4
2017	67649	583	924	-341	2	8.6	13.7	-5.0	3.4
2018	66996	597	908	-311	2	8.9	13.6	-4.6	3.4
2019	66328	532	935	-403	1	8.0	14.1	-6.1	1.9
2020	65545	552	1123	-571	2	8.4	17.1	-8.7	3.6
2021	64553	511	1345	-834	0	7.9	20.8	-12.9	0.0
2022	63832	495	1018	-523	0	7.8	15.9	-8.2	0.0

Definitions

Population size

Number of population in the respective year. The data on the number of population in 1961, 1971, 1981 and 1991 are census data, while for the inter-census years the number of population was calculated as an average inter-census difference. From 2002 are given the population estimates that were calculated according to the census of population results and the annual statistics of natural mechanical population movements.

Livebirths

Absolute number of live births in the course of a year. Live born child means a child giving vital signs after birth (breathing, i.e. heartbeat), even for the shortest time, regardless the mother's pregnancy duration.

Deaths

Absolute number of deaths in the course of a year. Deceased is a person that whenever after having been born live, shows permanently stopped vital signs.

Natural increase

Natural population increase is the number of live births minus the number of deaths.

Infants deaths

Absolute number of infants deaths in the course of a year. Deceased infant is a child that after having been born live and before aged one year, shows permanently stopped vital signs.

Livebirths, per 1 000 population

Livebirths rate is the ratio of the number of live births and the population size in the respective year. The number of live births is divided by the population size and then multiplied by 1000.

Deaths, per 1 000 population

General mortality rate represents the ratio between the number of deaths and the population size in the respective year. The number of deaths is divided by population size and then multiplied by 1000.

Natural increase, per 1 000 population

Natural population increase rate is the difference between the number of live births and the number of deaths, in relation to the population size in the respective year.

Natural population increase rate = (number of live births - number of deaths) / population size * 1000

Infants deaths, per 1 000 livebirths

Infant mortality rate is the ratio of deceased children under 1 year of age and live births in the respective year. The mortality rate is expressed per 1000 live births.

Infant mortality rate = (number of deceased children under 1 year of age / number of live births) * 1000
